Syntax

MARKDOWN SYNTAX

- Adding italics and bold:

```
*Italics*  
  
**Bold**
```

- Adding headers (titles) of various sizes:

```
# header one  
  
## header two
```

- Adding hyperlinks and images:

```
[Link](http://a.com)
```

- Adding block quotes:

```
> Blockquote
```

- Adding lists:

```
*  
  
*  
  
*
```

- Adding horizontal lines:

```
---
```

- Adding inline code:

```
`Inline code with backticks`
```

- Adding code blocks

```
```\n\ncode\n```\n
```

---

## JUPYTER NOTEBOOK SPECIAL COMMAND

- Displaying the code execution history:

```
%history -p
```

## Concepts

- Jupyter Notebook, often referred to as Jupyter, is much more complex than a code editor. Jupyter Notebook allows us to:
  - Type and execute code
  - Add accompanying text to our code (including math equations)
  - Add visualizations
- Jupyter can run in a browser and is often used to create compelling data science projects that can be easily shared with other people.
- A notebook is a file created using Jupyter notebooks. Notebooks can easily be shared and distributed so people can view your work.
- Types of modes in Jupyter:
  - Jupyter is in edit mode whenever we type in a cell — a small pencil icon appears to the right of the menu bar.
  - Jupyter is in command mode whenever we press **Esc** or whenever we click outside of the cell — the pencil to the right of the menu bar disappears.
- State refers to what a computer remembers about a program.
- We can convert a code cell to a Markdown cell to add text to explain our code. Markdown syntax allows us to use keyboard symbols to format our text.
- Installing the Anaconda distribution will install both Python and Jupyter on your computer.

## Keyboard Shortcuts

- Some of the most useful keyboard shortcuts we can use in command mode are:
  - **Ctrl + Enter**: run selected cell
  - **Shift + Enter**: run cell, select below
  - **Alt + Enter**: run cell, insert below
  - **Up**: select cell above
  - **Down**: select cell below
  - **Enter**: enter edit mode
  - **A**: insert cell above
  - **B**: insert cell below
  - **D, D** (press D twice): delete selected cell
  - **Z**: undo cell deletion
  - **S**: save and checkpoint

- Y: convert to code cell
- Some of the most useful keyboard shortcuts we can use in edit mode are:
  - M: convert to Markdown cell
  - Ctrl + Enter: run selected cell
  - Shift + Enter: run cell, select below
  - Alt + Enter: run cell, insert below
  - Up: move cursor up
  - Down: move cursor down
  - Esc: enter command mode
  - Ctrl + A: select all
  - Ctrl + Z: undo
  - Ctrl + Y: redo
  - Ctrl + S: save and checkpoint
  - Tab : indent or code completion
  - Shift + Tab: tooltip
